The world is the new classroom.

Learn how mobile technology solutions from Apple can create a 21st century learning environment on your college or university campus.

There's no bigger or more important trend in education than mobile learning. Everyone's talking about how it creates opportunities for learning outside classroom walls — and beyond classroom hours. Mobile learning can help make any subject more relevant and more "real" for students. And it lets institutions reach students scattered across a state or across the world.

In this hands-on session, discover how only Apple makes it simple for your institution to do all this — not a few years from now, but today.

iPod touch

Internet access, web applications, and a large screen make the iPod touch perfect for mobile learning. At this session you'll experience first hand how to use the iPod touch in the classroom.

iTunes U

Students now expect anytime access to information, no matter where they are. Learn why universities are turning to iTunes U to distribute digital content to their students.

MacBook

The MacBook family is perfect for today's faculty, students and staff. Powerful, lightweight, and durable, the MacBook makes digital content creation on the go a breeze.

Mac OS X

The operating system standard on every Mac, Mac OS X includes hundreds of innovations. And its power and simplicity keep the focus on learning, not the technology.

Podcast Producer

Podcast Producer is a complete, end-to-end solution for encoding, publishing, and distributing high-quality podcasts. It's ideal for university lectures and presentations.

Thursday, February 19, 2009
9:30 - 11:30 a.m.

University of Alaska, Fairbanks
Butrovich Building
Board of Regents Room
